

Presented at the FIG e-Working Week 2021,
21-25 June 2021 in Virtually in the Netherlands

SMART SURVEYORS FOR LAND AND WATER MANAGEMENT CHALLENGES IN A NEW REALITY

eWORKING WEEK 2021
20-25 JUNE

Capra Alessandro

10971

Underwater Photogrammetry for Change Detection

Tuesday, 22 June 15:00–16:30

ORGANISED BY

PLATINUM SPONSORS

UNDERWATER 3D MEASUREMENTS

- Resolution
- Accuracy
- Repeatability
- Spatial scale

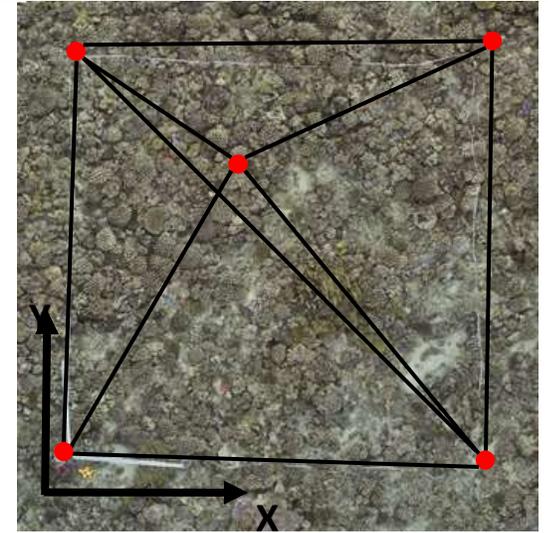

Ecomar - Belize

PHOTOGRAMMETRY – GROUND REFERENCE NETWORK

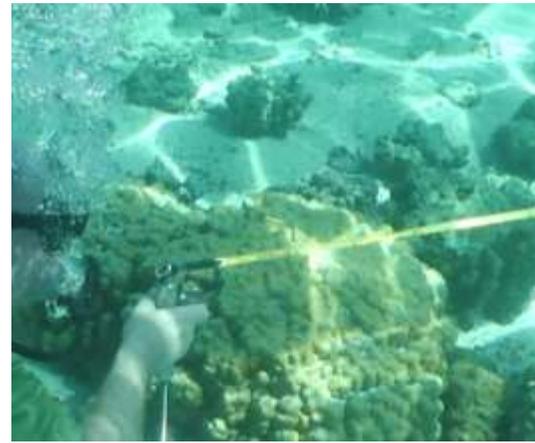

UNDERWATER PHOTOGRAMMETRY – THE NETWORK

- Stable points materialization
- Distances measurements
- Height differences measurements (levelling)
- Least squares network adjustment

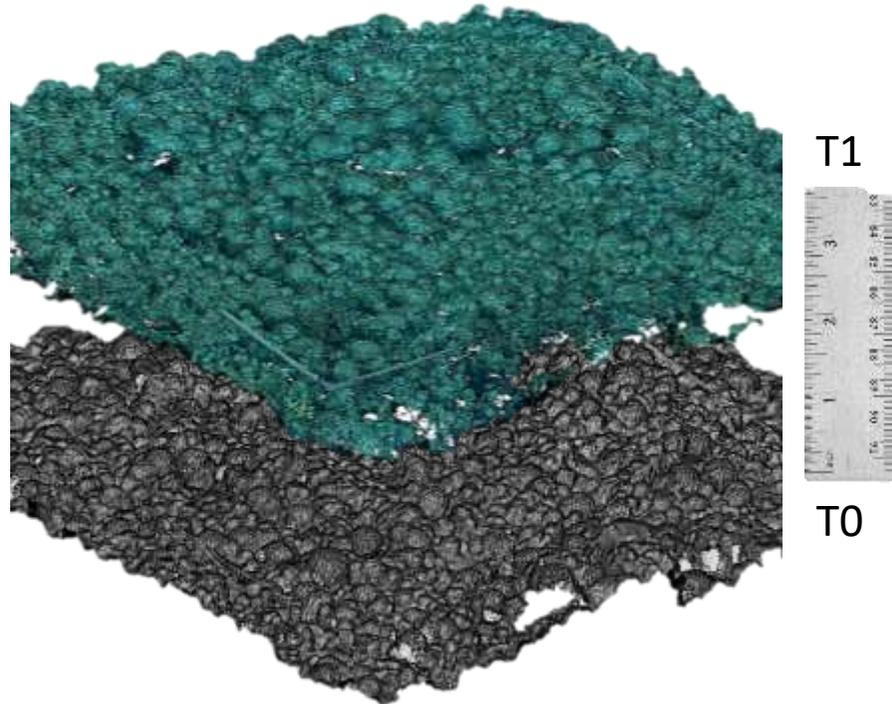

COORDINATES IN A LOCAL
REFERENCE SYSTEM,
FEW MM OF ACCURACY

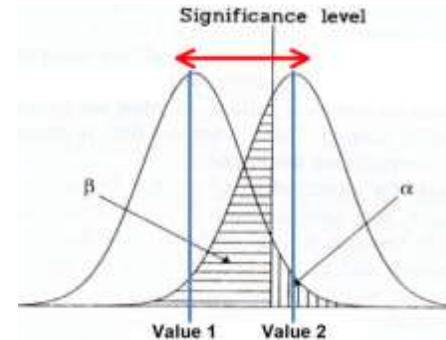

3D RESULTS AT DIFFERENT EPOCHS - MONITORING

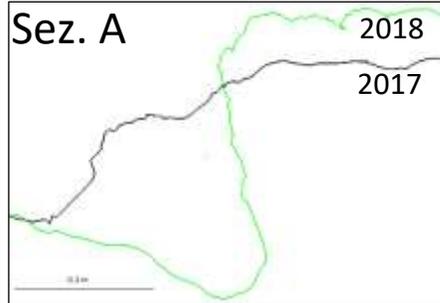

Same reference system (accurate co-registration)

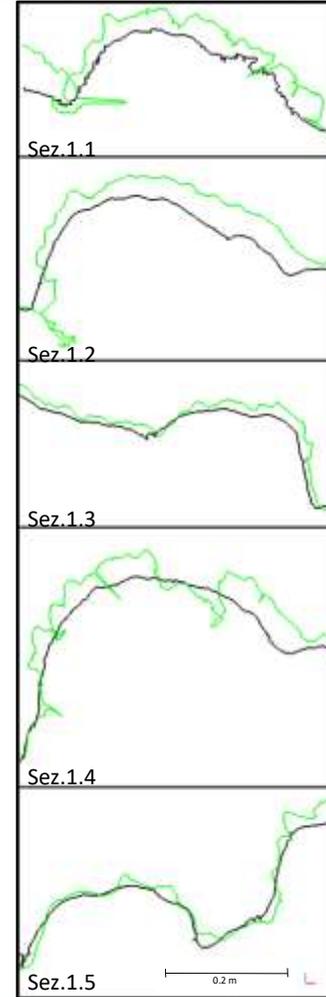

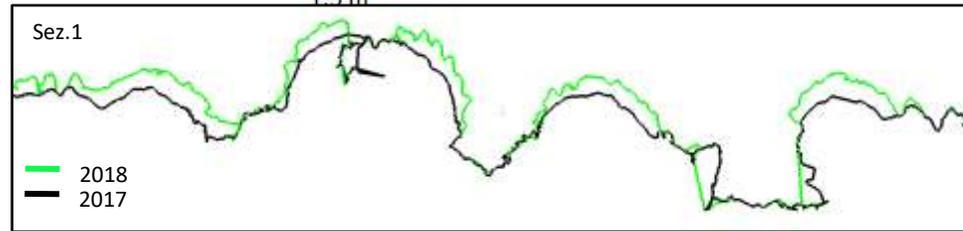

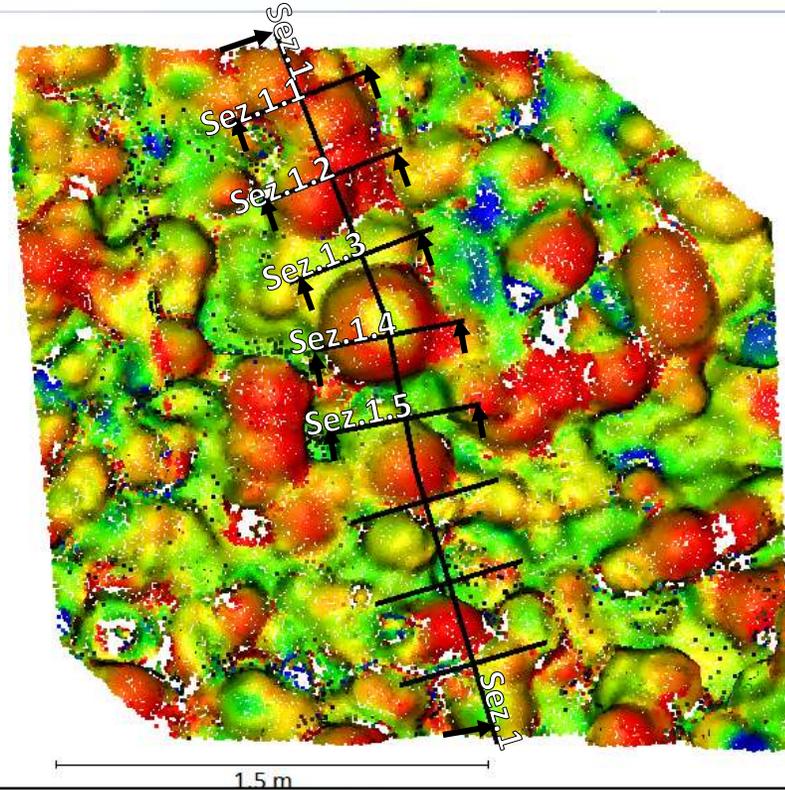

Known 3D models' errors

ARE THE DETECTED CHANGES SIGNIFICANT?

Subsequent photogrammetric models for multitemporal monitoring - high resolution high accuracy (mm | cm)

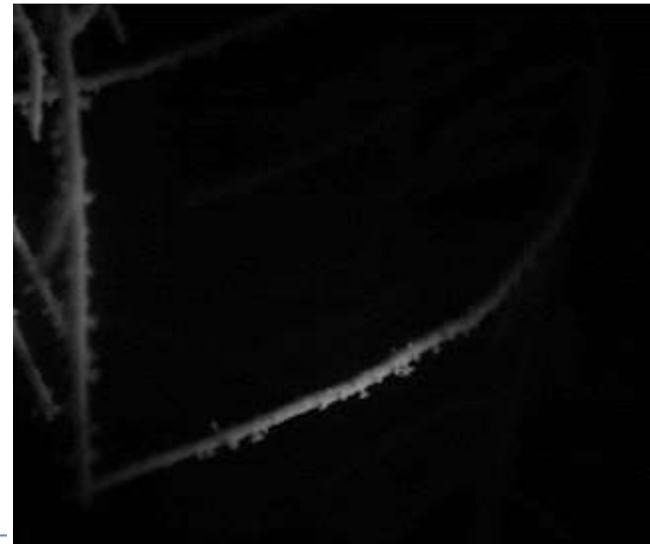

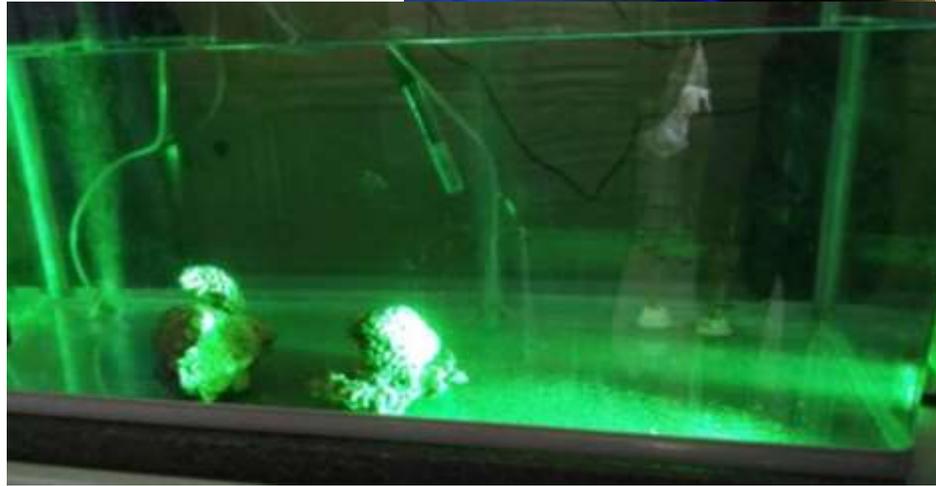

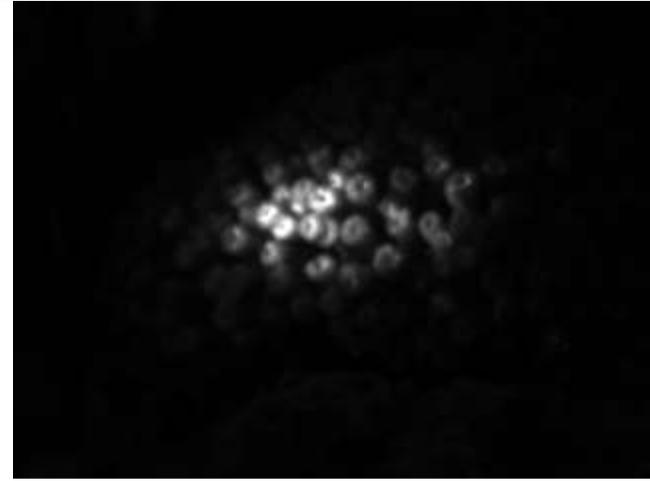

GEOMETRY AND BIOMETRY

Systems for the monitoring and 3D reconstruction of marine bioconstructors organisms

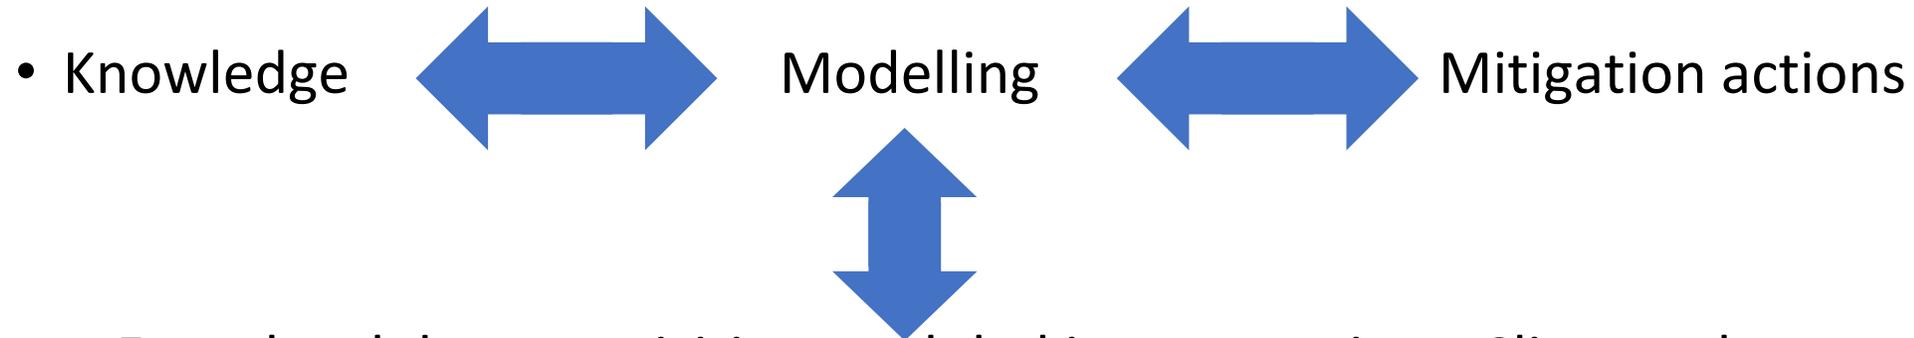

TESTING FLUORESCENCE

CONCLUSIONS

- High resolution 3D survey and monitoring
- Biometry

From local data acquisition to global interpretation - Climate change

(Global Reef Monitoring network - <https://gcrmn.net/>)
