

Determining the Future Demand, Supply and Skills Gap for Surveying and Geospatial Professionals in Australia: 2022-2032

Michelle Blicavs (Australia)

Key words: Capacity building; Education; Surveying; Education; Skills; Demand; Value

SUMMARY

The Association of Consulting Surveyors (CSN) has been keeping a watchful eye on the demand for surveyors across Australia since 2012, providing a future look over the next 10 years into the requirements for the profession. CSN commissioned BIS Oxford Economics to provide an updated workforce capability study utilising the 2021 Census data and the most recent developments across educational completions and labour market indicators.

Demand drivers for our profession include the property, construction and mining sector. Supply drivers include education enrolments and qualification completions (including registration and licensing), demographic ageing of the existing workforce and its impact on retirement within the surveying profession and productivity growth driven by new technologies, practices and systems.

Where measures of workforce demand exceed currently available supply are referred to workforce gap. The 2022 report highlights where and when workforce gaps are likely to be observed over the coming decade for each state and territory. Where gaps are unlikely to be filled by new supply at a national level from the education system, a capability deficit arises.

This presentation will highlight the key findings of the research and report including:

- The current total workforce for surveying and geospatial professions is now 19,000 persons with 10,800 employed as surveyors – a 22% increase since 2017/18. Though the number of licensed/registered surveyors decreased by 7.7% to just under 2,400.
- The increase nationally in infrastructure projects and a backlog in residential will drive the demand for surveyors over the next two years, with a peak in demand in 2023/24 requiring 20,200

Determining the Future Demand, Supply and Skills Gap for Surveying and Geospatial Professionals in Australia:

professionals. In the same year, the capability gap will reach 1,500 professions as new supply from graduates falls short of the increased demand.

This presentation will identify the focus areas for the profession in the coming few years to ensure a sustainable and increased output from the workforce is achieved.

Should time allow, there were two other new aspects to the report that will be featured in the presentation:

1. The value surveying adds to the broader property and construction sector
2. The impact of natural disasters on the workforce capability

The full report will be available at <https://www.consultingsurveyors.com.au/our-industry/industry-research/> by 1 March 2023.
